Recepción a estudiantes y docentes de ProPeace. La biblioteca del IES Valle Inclán de Pontevedra fue este martes el escenario de una recepción a estudiantes y docentes de Europa y otros países integrados en ProPeace. Se trata de una asociación estratégica que busca situar el campo académico del patrimonio en una perspectiva europea. FOTO **RAMÓN LEIRO**

Example 1 The bond between the carbonyl carbon and the α -carbon in 2,2,4,4-tetramethyl-3-pentanone is relatively weak, and the molecule is susceptible to cleavage at this bond. This is a common reaction for ketones with α -quaternary carbons. The reaction is called **retro-Favorskii rearrangement**. The mechanism involves the formation of a cyclic intermediate, a **bicyclic ketone**, which then undergoes ring opening to form the products. The reaction is reversible, and the products are 2,2,4,4-tetramethyl-3-pentanone and 2,2,4,4-tetramethyl-3-pentanone.

Landslag

Svartir hamraveggir, grænir vellir, djúpar gjár og blátt vatnið einkenna landslag á Þingvöllum. Hraunin í sigdalnum, milli Almannagjá og Hrafnagjá, eru öll runnin eftir ísöld.

Há fjöll umlykja Þingvallavæðið: Botnssúlur, Ármannsfell, Skjaldbreiður, Hrafnabjörg og eyðst er Hengill þar sem jarðhitagufa stígur til himins.

Óxará fellur um 15 km leið til Þingvallavatns úr litlu stöðuvatni sem nefnist Myrkavatn.

Í Óxarárfossi steypist áin fram af 12 m háum hamravegg Almannagjá, rennur um gjána í Drekkingshyl og úr henni um Neðrifoss. Þaðan líðast áin um Efri-Velli, hólma og eyrar og út í vatnið.

Útfall Þingvallavatns nefnist Sog. Það er vatnsmesta lindá á Íslandi.

Landscape

Black cliffs, green plains, deep fissures and blue waters characterise Thingvellir's landscape. The lava in the rift valley, between Almannagjá and Hrafnagjá, was all erupted after the Ice-age glaciers retreated.

High mountains surround the Thingvellir area: Botnssúlur, Ármannsfell, Skjaldbreiður, Hrafnabjörg and to the south Hengill, where geothermal steam ascends skywards.

Óxará river flows down a 15-km-long route to Thingvallavatn lake, from a small lake called Myrkavatn.

At Óxarárfoss, the river cascades off the 12-metre-high cliffs of Almannagjá and flows along the gorge and through Drekkingshylur, before emerging from the gorge at the Neðrifoss waterfall. Then it meanders across Efri-Velli, around the islets and bars and into the lake.

Lake Thingvallavatn's outlet is the river Sog. It is the biggest spring-fed river in Iceland.

Esta semana o IES Valle Inclán e o grupo de traballo EEPE organizan un encontro sobre o Patrimonio Europeo.

PROJET POUR UN PATRIMOINE EUROPÉEN

PROPEACE

ET UN AVENIR CULTUREL ENSEMBLE

Martes 9 de abril das 16:00 ata as 18:30 na biblioteca do centro

ProPEACE é unha asociación estratéxica na que participan 10 socios.

ProPEACE busca situar o campo académico do patrimonio nunha perspectiva europea. Para facer isto, ofrece solucións innovadoras para unha modernización dinámica da educación superior europea sobre o patrimonio.

Coordinador: Université Jean Monnet Saint-Etienne, Francia

Socios:

1. Stofnun Arna Magnússonar í Íslenskum Fræðum Sam. Reikjavík Islandia
2. STICHTING WAGENINGEN INVESTIGACIÓN WAGENINGEN. Holanda
